

AMENDMENTS TO THE SPECIFICATION

In the Specification

Please substitute the following amended paragraph(s) and/or section(s) (deleted matter is shown by strikethrough and added matter is shown by underlining):

Paragraph beginning at page 5, line 1.

Referring back to Figs. 1 and 12, the swing arms 52 are rotatable about swing arm post 50 to facilitate loading and unloading of risers 120. Swing arms 52 rotate outward to allow for full access to the support area ~~[[140]]~~ 110 of riser cart 10, and swing inward to a substantially parallel position with respect to each other to secure risers 120 upon riser cart 10.

Paragraph beginning at page 6, line 3.

In operation, loading of risers 120 begins by opening swing arms 52 by pushing upward on the underside of the horizontal support bar 54 of the upper swing arm 52 as close to swing arm post 50 as possible. Lifting swing arm 52 in this manner frees keeper 56 of that swing arm 52 by disengaging projection 62 of that keeper 56 from depression 60 of the keeper 56 directly below. Referring to Fig. 1, this operation is continued until all swing arms 50 are disengaged and rotated away from the support area ~~[[140]]~~ 110.
